# 5 THINGS TO LOOK FOR IN A CYBERSECURITY TOOL

Tips to help cyber pros put together the right puzzle of tools that create a complete picture of what's going on

## 01 IS THE TOOL SCALABLE?

A tool must be scalable in terms of the volume and diversity of the environment in which it will operate.
## IS IT EASY TO INTEGRATE? 02

A tool should be able to integrate with upstream and downstream systems to enable a holistic cybersecurity workflow without fragmentation.

## 03 WAS IT PURPOSE-BUILT?

The tool you choose must be uniquely tailored for whichever use case you have in mind.

## IS IT WELL SUPPORTED? 04

Support is an essential parameter when choosing any enterprise technology solution, and it is even more critical for cybersecurity tools as it is a fast-evolving discipline.

## 05 IS IT WIDELY COMPATIBLE?

The tool you select must be compatible with your existing and future technology investments.
